# PE Submission Details

Four Steps

Step 0

- You do not need to do anything (except trying out the Mock PE) before the real PE

Step 1 Download PE from Examplify

- Using the Lab machines
- Arriving to the venue
- Log in the Examplify in the lab machines (not your own laptop)
- Down load the Examplify PE file

Step 2 Start PE and Work on your code

- Once you started the PE in Examplify, you have two hours of time before the timer runs out in Examplify

- You should copy the skeleton code from the template in the document in the different files.
  - E.g. `part1.py, part2.py, part3.py.`

- You should NOT use another apps including (but not only limit to)
  - Any aids like AI tools

3. Before the PE ends

- During the PE period
  - First, tidy up your code
    - E.g. remove/comment out your test case or bad version of your code
  - You should not submit any unnecessarily code for each part. E.g. we will deduct marks if we found your code in Part 1 is in Part 2 submission.
    - And do not submit your test cases
    - We will deduct marks for this
  - Before the PE ends, copy and paste your PE solution for each part into Examplify
  - Make sure the submission to Examplify is the SAME as your local saved file
- When you copy your code into Examplify, the indentations will be lost. You do not have to worry about that.

4. After the PE ends

- We will email and let you review your submission to Examplify
- After reviewing and making sure your local saved copies. Submit each part into Coursemology before the deadline
- Make sure that your code is runnable, namely, the code should have the correct indentations.
- And all these implies that your submission in Examplify before HAVE to obey these rules

Important

- We will mark your Coursemology submission if it is identical to your submission on examplify
  - Identical except the indentations
- If anyone has difference between the code on Coursemology and Examplify, we will
  - Retrieve the code on Examplify and mark it on Coursemology
  - Deduct 50% of the result score on that part.
- At the end of the day, we have to stick on the version of your Examplify submission because it is what you produced during the PE

Difference between Mock PE and PE

- Mock PE is OTOT
  - Own time own target
- We will not check if you have "cheated" in your "Mock PE"
  - The questions are very simple, if you cannot do those, you are in big trouble in the real PE
- Mock PE will be 1%
  - 0.5% for your Coursemology submission if you passed at least one test case for both parts
  - 0.5% if your submission between Examplify and Coursemology are the same.
